## **What is a Discovered Attack?**

A discovered attack is a tactical motif in chess in which a piece moves to reveal an attack by another piece that was previously hidden. This can be a very powerful move, as it can often lead to the capture of an opponent's piece or even checkmate.

There are many different ways to create a discovered attack. One common method is to move a pawn forward one square, revealing an attack by a rook or bishop behind it. Another way is to move a knight or bishop to a square that attacks an opponent's piece, while also revealing an attack by another piece.

Discovered attacks can be very difficult to defend against, as they often come as a surprise to the opponent. If you can master this tactical motif, you'll be a much more dangerous player.

## **Benefits of Solving Chess Puzzles**
