

My Daughter Sickle Cell Disorder Story: A Mother's Journey of Unwavering Love and Resilience

Sickle cell disease is a serious inherited blood disorder that affects millions of people worldwide. It is caused by a mutation in the gene that makes hemoglobin, the protein in red blood cells that carries oxygen throughout the body. In people with sickle cell disease, the hemoglobin is abnormally shaped and can form stiff, sickle-shaped red blood cells, which can get stuck in small blood vessels and cause pain, tissue damage, and a variety of health problems.
